

KardiVa® DiLA'S Laser® RingFire Catheter

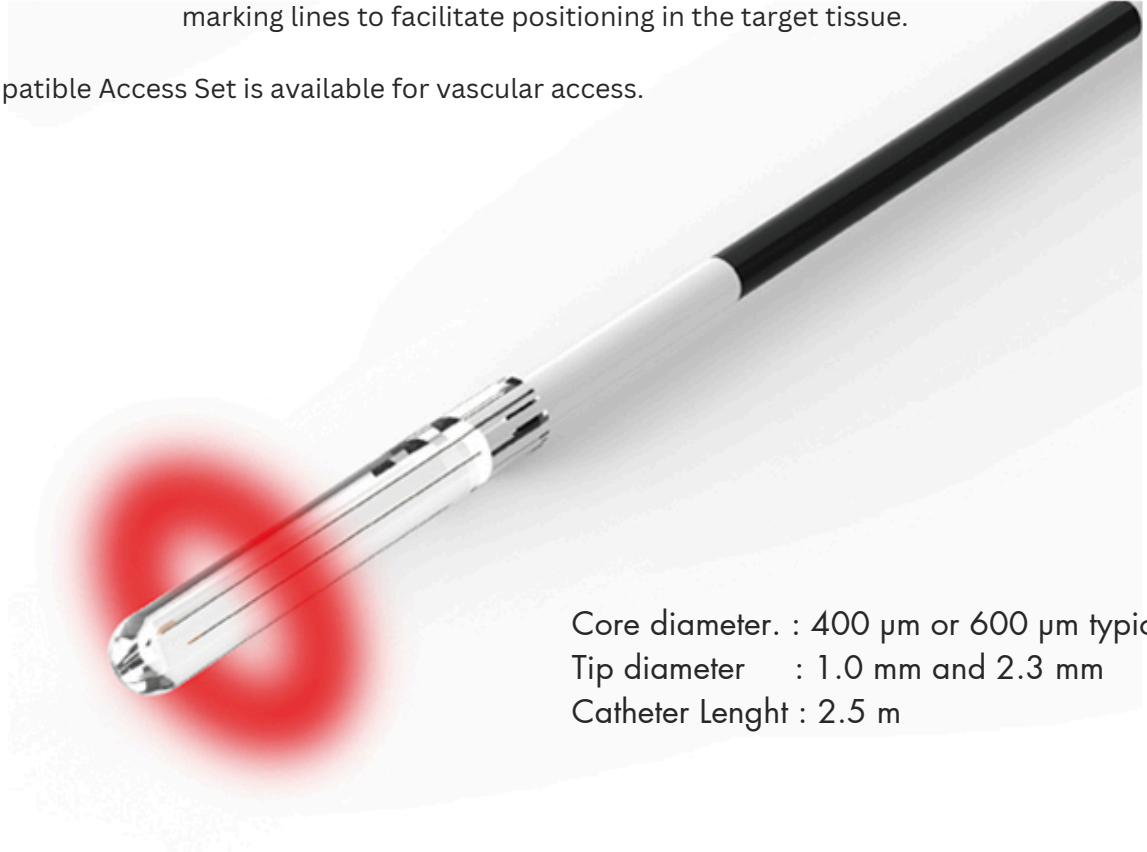

KardiVa® RingFire Fiber is a device designed for radial laser treatment.

KardiVa® RingFire was developed for laser treatment of patients with anal fistula, pilonidal sinus and venous insufficiency.

The cylindrical 360° laser light emission of our RingFire Fiber ensures smooth and gentle laser energy delivery to the target tissue. Intravascular, intrastitial and intracutaneous laser ablation treatments can benefit from a smoother procedure and increased patient comfort.

The optimized fused fiber tip design ensures first-class safety and durability. The optical fiber has marking lines to facilitate positioning in the target tissue.

A compatible Access Set is available for vascular access.

Core diameter. : 400 μ m or 600 μ m typically
Tip diameter : 1.0 mm and 2.3 mm
Catheter Length : 2.5 m
